

## **iframe:- InLine frame**

#. A Webpage which is embedded in another webPage is known as frame or iframe.

#. if our Web element exists inside frame ,then we need to switch to that frame and perform the Operation.

#. For better identification of Web Element :- if it is inside frame or not:-

#. Right click on the Web Element,we are trying to locate and if it shows "Reload frame" or "view frame source"

that means we are dealing with frame.

#.To Perform any operation inside frame ,first will have to swicth to that frame.

#. To switch to the frame, will use `switchTo().frame()`.

frames:-

1. `driver.switchTo().frame(name);`
2. `driver.switchTo().frame(id);`
3. `driver.switchTo().frame(WebElement);`
4. `driver.switchTo().frame(index);`
