# JavaScriptExecutor:

JavaScriptExecutor:-

#. JavaScriptExecutor is an Interface.
#. executeScript() :- We can execute javascript statements.
#. Sometimes click() method is not clicking on the WebElement due to some reason.

In that case will get ElementInterceptedException/ ElementClickInterceptedException

Action Method: click(), sendKeys().

Scrolling the Page using JavaScript Executor:-

#. Scrollbar is based on the browser not part of the Application.
#. If the contents are small the scrollbar will not appear, if the contents are big then scrollbar will appear.
#. Scrollbar is not a WebElement.

Copy (Ctrl+C)

Not Copy the selection from the canvas
and put it on the Clipboard.

#. For Horizontal Scroll, Use ScrollWidth instead of ScrollHeight.
