Radio Button & Checkbox Handling:-

#. Radio Button : Only one selection is possible.
#. Checkbox: one or more than selection is possible.
#. Way to deal with radio button and checkbox is exactly the same.
#. Radiobutton and Checkbox most of the time will have tagName "input" and one of the attribute as name.

Before performing click operation on any radio button/check box , sometimes we need to verify below condition:-

1. Verify whether radio button/checkbox is enabled or not:- isEnabled() : Return boolean (true/false)
2. Verify whether radio button/checkbox is displayed or not :- isDisplayed() : Return boolean (true/false)
3. Verify whether radio button/checkbox is selected or not :- isSelected() : Return boolean (true /false)
